

TAKING YOU OFF FOR GROWTH THROUGH ESTABLISHED, REPEATABLE & SCALABLE

APPLICATIONS DEVELOPMENT PRACTICES

TekMindz is enabling businesses to refine their enterprise application strategies by helping them to deploy, manage and modernize their application portfolios.

Integrating people, processes and technologies for organization to better support business innovation

With the rapid rise of mobile, social and cloud computing, markets are witnessing tremendous new opportunities. As such, enterprises will need to strategize to enter new markets, create competitive advantages and drive operational efficiencies. To capitalize on these new opportunities and to cater to the needs of the new consumer to deliver rich consumer experiences, we are empowering enterprises through new applications that are unlike the applications of the past. We are enabling business transformation through applications of the future that support innovative systems to thrive in the new consumer-driven market.

Improving IT responsiveness to enterprises to support greater overall Business Agility

The coming of new technologies requires organizations to devise enterprise-wide strategic initiatives and new forms of Agile approaches that are pervasive throughout the enterprise to effectively leverage the adoption of continuous integration, testing and delivery practices.

TekMindz are helping businesses in the adoption of new technology platforms while effectively reconciling existing practices with new integrations through the implementation of iterative practices.

We are helping enterprises achieve measurable, delivered outcomes by combining proven agile practices with enterprise wide approaches, to realize continuous improvement in quality and operational efficiency.

Best practices for mobile, social and context-aware Applications

As technologies, products and markets for mobile, social and context-aware applications evolve, the application development (AD) landscape will also need to evolve to accommodate rapid changes. Explosive growth of devices like smartphones and tablets has created a huge demand for mobile applications, posing a challenge to enterprise developers.

TekMindz are successfully enabling enterprises address these demands through transformation beyond ad hoc development efforts through established, repeatable and scalable mobile application development (AD) practices.

Enabling enterprises in architecting applications to leverage Cloud, Mobile, Social and Big Data

We are helping enterprises capitalize on new application architectures by bringing solutions and application architecture models that support mobile clients, leverage or publish cloud services, and perform analytics on cloud, social and partner data. We are:

- Establishing service-oriented architecture (SOA) in application development to integrate on-premises commercial off-the-shelf (COTS) and legacy applications, as well as business partner applications and cloud services.
- Leveraging SOA's separation of concerns and encapsulation to integrate mobile, social and cloud data sources with variable structured and unstructured data models.
- Leveraging event-driven architecture (EDA) where loose coupling is most critical.
- Bringing AD best practices that are more agile and incremental.
- Leveraging open computing via open-source offerings, open standards and open data.

We leverage new architectural styles that best integrate traditional and modern applications to deliver cost-effective solutions to business requirements

The TekMindz Advantage

TekMindz's Application service enables businesses to integrate new technology to existing portfolios to achieve higher speed, agility and cost effectiveness and drive greater business value.

We enable organizations in creating and evolving new capabilities to achieve competitiveness and respond rapidly to changing the market landscape by leveraging modern technologies and opportunities such as the cloud, information, mobile devices and social media.

We help businesses attain higher growth through faster entry into new markets from better decision making and greater agility and flexibility.

About TekMindz

TekMindz is an IT consulting & technology services company with headquarters in India, serving clients across Asia/Pacific, Middle East, North America and Africa. Bringing together technology, people and processes across diverse sectors for organizations around the world, TekMindz enables business enterprises and governments to most effectively serve their customers and citizens.
