

APPLICATION ENGINEERING TO BRING
SPEED & AGILITY
TO YOUR BUSINESS

TekMindz is enabling IT to drive business transformation by delivering flexibility, rapid time to market and cost-effectiveness for software applications.

Business Challenges

Application portfolios are getting more and more complex. As the competitive landscape becomes cutthroat, business and IT leaders can no longer focus solely on cost effectiveness while addressing their software applications strategies. Applications are now becoming key drivers for growth, innovation through new products and services and new customer acquisition.

Application managers, Chief Information managers and Chief Technology officers are constantly addressing the evolving and rapidly changing application ecosystem with the emergence of new technologies such as cloud, social media and mobility. There lays emphasis on simplification and rationalization of applications to reduce complexity and risk. Yet at the same time, to achieve more cost effectiveness, greater efforts and focus centers on modernizing applications to support massively connected technology solutions in order to drive greater business value through IT.

Managing Existing Portfolios, While Bringing New Functionality

Application leaders increasingly seek new and innovative ways to incorporate new technologies such as mobile devices and information and analytics into existing systems. Yet, it is critical for businesses to strike the right balance between current and future application portfolios through established standards and architectures to sustain their mutual coexistence and progressive transformation.

To help businesses overcome such complexities, we create new application portfolios that support new consumer-driven delivery models. At the same time, we also help businesses in transforming their existing application portfolios to go through modernization and new integrations to support new dimensions and deliver additional value for their business.

Rationalizing Application & Enabling Them For The Future

Businesses application rationalization typically occurs when IT enterprises undergo business transformation through mergers or acquisitions. Another driving factor to rationalize application portfolios is strategic shifts to address the evolving IT landscape. This results in altering business dynamics and in turn, driving replacement, retirement, modernization or consolidation of legacy applications.

TekMindz helps enterprises in reviewing existing applications and developing application strategies to rationalize legacy application portfolios to become future-enabled. We help enterprises achieve business transformation by preparing their application portfolios to leverage cloud infrastructure, analytics, social and mobile integrations.

Application Modernization

TekMindz's Application modernization service offers the migration of legacy to new applications or platforms, including the integration of new functionality to provide the latest functions to the business. Our Modernization services include:

- Re-platforming
- Re-hosting
- Recoding
- Re-architecting
- Re-engineering
- Interoperability
- Replacement and Retirement.

We also consult on changes to the application architecture to clarify which option should be selected.
